

# Package: dlib (via r-universe)

September 8, 2024

**Type** Package

**Title** Allow Access to the 'Dlib' C++ Library

**License** BSL-1.0

**Version** 1.0.3.1

**Date** 2018-05-07

**Maintainer** Jan Wijffels <jwijffels@bnosac.be>

**Author** Jan Wijffels, BNOSAC, Davis King and dlib package authors (see file AUTHORS)

**Description** Interface for 'Rcpp' users to 'dlib' <<http://dlib.net>> which is a 'C++' toolkit containing machine learning algorithms and computer vision tools. It is used in a wide range of domains including robotics, embedded devices, mobile phones, and large high performance computing environments. This package allows R users to use 'dlib' through 'Rcpp'.

**LinkingTo** Rcpp

**Copyright** see file COPYRIGHTS

**Imports** Rcpp

**Suggests** inline, magick

**RoxygenNote** 6.0.1

**NeedsCompilation** yes

**Date/Publication** 2020-10-14 16:34:38 UTC

**Repository** <https://jwijffels.r-universe.dev>

**RemoteUrl** <https://github.com/cran/dlib>

**RemoteRef** HEAD

**RemoteSha** 8159beffca5f75eed64f563a35d4a332afdfb558

## Description

'Dlib' <<http://dlib.net>> is a 'C++' toolkit containing machine learning algorithms and computer vision tools. It is used in a wide range of domains including robotics, embedded devices, mobile phones, and large high performance computing environments. This package allows R users to use 'dlib' through 'Rcpp'.

## See Also

[inlineCxxPlugin](#)

## Examples

```
## Not run:
library(Rcpp)
library(inline)
library(dlib)

##
## Example adapted from http://dlib.net/surf\_ex.cpp.html
## Find the SURF (https://en.wikipedia.org/wiki/Speeded\_up\_robust\_features)
## features of an image

##
## Step 1:
## Register a function called dlib_surf to read and extract the FHOG features
## have a look at the file for how it is structured
f <- system.file("extdata", "rcpp_surf.cpp", package = "dlib")
cat(readLines(f), sep = "\n")
sourceCpp(f)

##
## Step 2:
## Convert image from jpeg to BMP3 format as in the dlib_surf function,
## we assume the file is in BMP3 format
library(magick)
f <- system.file("extdata", "cruise_boat.jpeg", package = "dlib")
img <- image_read(path = f)
img
f_bmp <- tempfile(fileext = ".bmp")
image_write(img, path = f_bmp, format = "BMP3")

##
## Step 3:
## Apply the function Rcpp function dlib_surf on the image
dlib_surf(f_bmp)
```

```
## End(Not run)
```

---

`inlineCxxPlugin`      *Rcpp plugin for dlib*

---

**Description**

Rcpp plugin for dlib

**Usage**

```
inlineCxxPlugin()
```

**Value**

a list

**Examples**

```
library(Rcpp)
library(inline)
library(dlib)
getPlugin("dlib")
```
